

Titanium Stand-Alone Cervical Spacer System

PRO-LINK® -Ti

LOW-PROFILE SYSTEM

The Pro-Link Stand-Alone cervical spacers are designed with a large, open graft area for maximum bone graft capacity. The spacers allow fusion at adjacent segments without the removal of an existing anterior cervical plate. The low-profile locking plate provides security against screw backout without disturbing surrounding soft tissue.

Key Features and Benefits are:

- » Innovative design allows for adjacent level surgery without needing to remove existing cervical plates
- » Low-profile locking plate provides security against screw backout
- » Large, open graft windows for maximum visibility and bone graft containment
- » OSSEO-LOC™ Optimized surface treatment offering ideal porosity¹
